Knee cap, tibia and the lower femur protections consist of an elastomeric material which allows impact to be absorbed and makes the central area of the knee brace flexible, guaranteeing a perfect fit. The double articulation system on the sides is made from a combination of various technopolymers and stainless steel inserts which in turn guarantees maximum freedom of movement and at the same time gives excellent torsional rigidity and high flexibility of the knee. The kneecap shell guarantees freedom of movement and a comfortable fit, it is also adjustable. The interior is made of a soft neoprene material which is removable and washable. A perfect fit is assured by the 3 adjustable straps, numbered in the correct closing order. Protection of the knee, tibia and femur **HOMOLOGATION EN 1621-1/12 LEVEL 2**
