# LENS TECH

## SHATTERPROOF POLYCARBONATE

All Epoch products contain shatterproof polycarbonate lenses that meet all ANSI Z80.3 requirements for fashion and nonprescription sunglasses.

## HYDROPHOBIC

A hydrophobic coating is a nanoscopic surface layer that repels water. The coating causes an almost imperceptibly thin layer of air to form on top of a surface, repelling dust and causing water to fully rebound in the shape of a column.

# LENS OPTIONS

### CLEAR

100% UVA/UVB protection, without any tint or light filtering properties.

### YELLOW

Provides greater clarity in fog, haze and other low-light conditions. Also, filters out blue light from computer screens and other electronic devices that can cause eye fatigue and headaches. 100% UVA/UVB protection.

### AMBER

Good for variable everyday conditions & enhances contrast. Contains a red element to improve depth perception. 100% UVA/UVB protection.

### HIGH CLARITY BROWN

An alternative to amber lenses that offers more light protection, yet still containing the red element that improves depth perception. 100% UVA/UVB protection.

### HIGH CLARITY GREEN

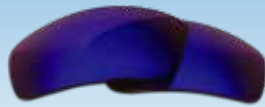

Good for general purpose use. Offers even color perception, dims glare while brightening shades, and provides good contrast for low-light conditions. 100% UVA/UVB protection.

### SMOKE

Good for general purpose use. Reduces eye fatigue, provides true color perception & minimizes glare, especially off water. Darkest tint with highest available light reduction. 100% UVA/UVB protection.

### MIRROR

Enhanced color perception while reducing glare -- all due to the addition of the color reflective coating. Ideal for full-sunlight, snow, and water-reflective conditions. 100% UVA/UVB protection.

### PHOTOCHROMIC

The lenses darken when exposed to sun and UV rays. In the absence of activating light the lenses return to their original color. Ideal for mid to low light conditions. 100% UVA/UVB protection.

### POLARIZED

Polarized lenses reduce glare and improves optical clarity & contrast. 100% UVA/UVB protection

Measurements for each product are represented in millimeters.

# PHOTOCHROMIC TECHNOLOGY

## STANDARD

Standard photochromic lenses change from a base of clear, yellow or amber to a gray smoke. This lens provides level **category 2** light transmission rates of 43%-19%.

## ADVANCED

Advanced photochromic lenses change from a base shade to a true smoke. The lens provides **category 3** light transmission rates of 18% - 8%.

\*\*\* The darkness of photochromic lenses will vary based on UV light exposure as well as temperature and weather conditions. All photochromic lenses have a limited lifetime warranty of 2 years from date of first use.

# ABOUT EPOCH EYEWEAR

*Rebecca Milner is the majority shareholder of Epoch Eyewear. She is a graduate of Wayne State University in Detroit, MI and a member of the Colorado Army National Guard*

In 2014, Epoch Eyewear began building a brand that was known for being the best quality sunglasses offered at prices people could afford. A passion for sunglasses and people has helped Epoch Eyewear to expand rapidly in a short period of time. Epoch's success grew rapidly after introducing safety rated sunglasses and photochromic lenses in our motorcycle products. The safety products delivered sunglasses that people actually wanted to wear when required to wear protective eyewear. The photochromic lenses not only beat competitors quality, but also their prices.

Although Epoch has experienced tremendous growth since 2014, we still operate with the customer service attitude of a small business. We stand behind our product 100% with a no-hassle warranty. Any wholesale customer can be confident that if we send the wrong product for your store, that we'll make sure you get the product that makes you money.

# SOCIAL MEDIA

We love seeing everyone enjoying Epoch Eyewear! Whether breaking records, pursuing your passion, or just having a great day out with those you love, tag us! We are happy to share our journeys together!
