1

6" BASIC SYSTEM

The 6" Basic system features our proven IFS technology with extended length steering knuckles that allow the factory upper control arms to be retained in the stock location while relocating the lower control arms. The lower arms are secured to the frame with our legendary arched crossmembers for superior ground clearance with solid 1/4" thick plate construction for unsurpassed strength. Lift is accomplished via a steel coilover shock spacer system retaining the stock ride characteristics of the vehicle. The Rack and Pinion remains in the factory location increasing installation time. Also included in this system is a 1/4" thick differential skid plate and impact struts. Rear lift is accomplished with a Block, Add-a-Leaf and U-bolt system.

2

6" PERFORMANCE SYSTEM

Our Performance system includes our Dirt Logic 2.5 Coilover shocks, providing incredible suspension dampening capacity for offroad use with a good highway ride. High arched lower control arm crossmembers with extended length ductile iron steering knuckles provides superior strength and longevity. The lower control arm crossmembers also utilize eccentric cams for easy alignment and the factory Rack and Pinion steering does not need to be relocated for installation. This system includes a 1/4" thick differential Skid Plate, Sway Bar links, Impact struts, and more.

2004-09 NISSAN TITAN

6" Basic System (15)

Use 315/70R17 tires w/17x8 wheels w/5" BS w/minor trimming

K6000 - Kit# w/Performance Shocks

K6000DB - Kit# w/Black Dirt Logic Shocks

- | | | |

6" BASIC SYSTEM

The 6" Basic system features our proven IFS technology with extended length steering knuckles that allow the factory upper control arms to be retained in the stock location while relocating the lower control arms. The lower arms are secured to the frame with our legendary arched crossmembers for superior ground clearance with solid 1/4" thick plate construction for unsurpassed strength.

Lift is accomplished via a steel coilover shock spacer system retaining the stock ride characteristics of the vehicle. The Rack and Pinion remains in the factory location increasing installation time. Also included in this system is a 1/4" thick differential skid plate and Impact struts. Rear lift is accomplished with a Block and U bolt system.

6" PERFORMANCE SYSTEM

This system is designed to provide additional front suspension dampening from heavy duty replacement front coilover shocks. The twin tube coilover shocks have been tuned to provide a quality highway ride with good offroad capabilities. System also features extended length ductile iron steering knuckles and 1/4" thick plate constructed lower control arm crossmembers for proper suspension geometry and strength. Standard with this Performance System is a 1/4" thick differential skid plate, Impact struts and a rear Block and U-bolt system.
