

2019

# BRAND INTRO

When you consider product-centric brands that have withstood the test of time, which come to mind? More importantly, why? Is it because of outstanding quality? Or perhaps it is the design and well considered details to help it function correctly. Maybe, it is because of the value proposition. In most cases, it is all three.

FirstGear® is one of those brands. For 29 years, we have been delivering well-made, versatile product at a great value. 2019 marks a milestone in the tenured history of the brand. A new team, with a new vision and a hyper focused outlook on drawing from our past to create a better future.

As riders, we pride ourselves on being newly-appointed torchbearers for FirstGear®. When planning the future of the brand, it was apparent that we needed to begin at the base in order to reinvent our foundation. We feel it is important to reduce secondary and tertiary pieces from this product section. It needs to be CORE. All components are required to enhance the rider's experience while working together with each other... No more and no less... Most importantly, we want to "walk the talk" and are personally testing prototypes for future-release products. We need to ensure our

design choices are well founded and the fit is on point with real life demands. Quite simply, we just needed to evolve.

Moving forward, expect to see product that will evolve our position in the market. While we have done our due diligence to create and maintain our foundation, the concepts that permeate the ideation process for 2019 will be expanded to include completely evolved versions of equity pieces like Kathmandu and Kilimanjaro™ while we move into the holiday seasons of 2019 and 2020.

Lastly, I'd like to personally thank you for your allegiance to our label. You've shown loyalty while our brand is going through it's trials and changes. While change is good, it is not always easy. FirstGear® is quite fortunate to have a following who have cared about quality and value for the past 30 years. We will continue to strive to create products, that suits the demands of all riders and riding styles.

Regards,  
Scott Sagud

## A PAGE FROM OUR APPAREL DESIGN PROCESS

When considering what seemed appropriate for FirstGear® moving forward, there were many potential avenues to be explored. Would the products be best suited for touring? Or perhaps better for off-road adventures? The history of the brand suggests that leather outerwear may be a viable plan to reinvigorate the brand. It was a clean slate, so to speak. So, the MAG apparel design team sat down to identify our guard rails.

We collectively believe the range of apparel and accessories offered from first gear should pay homage to the history of the brand, while focusing first on the items that will inevitably create the foundation. First and foremost, we needed to consider what our customer NEEDS while he or she is on the bike. This simple exercise of deduction inherently created a workspace where 'clutter' and 'novelty' could fall by the wayside, without impacting the product offering or brand message.

Through the ideation process, it became apparent these foundational items new for 2019.5 should encompass all aspects

of long distance, multi-day, heavy use, multi-climate riding scenarios. The garments should be stripped down to details that are simple but essential in the aforementioned set of scenarios. This would be the future of FirstGear®.

Versatile performance at a great value.

(story continues on page 6)

(continued from previous page)

The stage had been set. We knew what we wanted but how did we know our intuition was right for our customer? We could have trusted our instincts and hoped our partner factory had the same intention for the new products as we did. The rest of the industry operates this way, right? Our voices resounded 'NO', unequivocally. These garments needed testing. It was necessary to know our assumptions were correct by means of brutally thrashing the daylight out of each piece. So that is what we did.

I wanted to select a location that would provide a spectrum of less-than-ideal climates, on-road conditions, off-road conditions, traffic scenarios, etc. We ultimately decided on Vietnam. After a bit of research regarding tours available, we decided on exploring Saigon first, then flying north to Hanoi for an adventure moto tour. A week later, we packed our bags with the new prototypes and boarded our plane for the 14-hour flight east.

Fast-forward a few hours later after we signed our life away, bikes packed up and first time wrapping ourselves in the new gear. The initial look and feel was great. The materials felt incredibly durable yet comfortable. All the details seemed to be in the right place. That's when it started raining. We left the guide's home base and set out into the city. It's worth mentioning, the vehicle of choice on the mean streets of Vietnam are 4 stroke Honda mopeds. We were mounted upon late 90s XR 450s. Needless to say, we stood out. Weaving through mobs of traffic in increasingly consistent rain was actually quite fun. It was exactly what we were looking for. An adventure. Tire to tire with the moped in front and behind you like fish in a constantly flowing river of smoke and grit. I made sure to zip up all the vents in the jacket and the Z-liner worked just as intended, keeping me dry. As the traffic gave way to busses transporting bamboo scaffolding to neighboring cities,

In what seemed like a strange time warp, we finally arrived. After waking up from a late-night hotel check-in we were greeted by our Guide who would lead us through our jaunt and helped to describe the journey ahead. Barely awake, I nodded my head to every disclosure and safety briefing he presented and quite honestly can't remember one. In retrospect that may have been a good thing to pay attention to. We let him know we were there to test new gear, so don't be shy with the paths chosen. He chuckled to himself and said, 'There is one path - well see what you think of it'.

the highway speeds clicked up. The rain seemed to roll off the treated 600D jacket and over-pant with ease and we made our way straight toward the mountains on the horizon.

After about an hour and a half of riding, we arrived in the countryside. The one lane paved highway was flanked with small wooden structures offering provisions and wares. We took a pit stop to revive ourselves with a bit of Vietnamese coffee.

I took the opportunity to take a few photos of the water-resistant bags we had brought to test, at this point very wet and covered in mud and dirt from the road. The insides stayed remarkably dry. We spoke with the locals through our guide and came to learn quickly that we were about to embark on the two day long off-road section of the trip.

We left as quickly as we arrived at the coffee shop and headed north through

the village. The village quickly gave way to massive ferns and vegetation as lush as I have ever seen. We were undoubtedly not in Kansas anymore. Suddenly the road gave way to slick clay mud as we continued our ascent into the Vietnamese mountains. The persistent rain made the surfaces slick and challenging but the garments moved without limitation when dealing with the ever-unexpected bump, slide and jump along the dirt farmer's trail.

It's difficult to put into words what your senses experience in new situations like these. It really is what adventures are all about. Around each corner there was another expansive vantage point of spired mountain ranges that plummeted hundreds of feet to the sea below. Every view presented an awe that made schlepping a 120lb gear bag 7,746 miles across the world worth it. Dripping wet, covered in clay mud from periodic spills and smiling ear to ear.

(story continues on page 9)

We eventually made it to our first night's stay in the rural mountainside 6 hours outside of Hanoi. We opted for the homestay experience. This is where you have the opportunity to enjoy a meal and a roof over your head, provided by a family that lives in the village. We got out of our gear to notice the exterior was very wet and the interior remained very dry. The gear had seemed to pass the inclement weather test. We showered up, got warm and were served a delicious Vietnamese meal in the middle of nowhere.

The next morning, we awoke to the sound of roosters and laid all of the gear out. I was pleasantly surprised to find it quite dry in the almost 90% humidity. I checked for potential issues or design decisions that could be improved. Our guide and my travel buddy Adam checked for snakes and spiders. We all agreed the zippers needed major improvement, both on the outerwear and bags. A better system for keeping moisture out of external pockets was also considered. Due to the lack of dexterity in gloves, we decided a longer piece of webbing needed to be attached to the zipper pulls to adjust vents while

on the bike. I had remembered getting soaked on my left shoulder because of the inability to adjust the vent while moving down the highway in the rain. The straps on the out-seam of the over-pants needed to be reconsidered as well as it did not provide enough circumference for an Enduro style boot. The good thing was nothing ripped. All the seams stayed together on every crash and the garments were holding up well.

Back on the bikes and back into the hills. Today was significantly warmer and less rainy. It provided an opportunity to open up the vents and see how the jackets and pants functioned more as impact shells and less as water barriers. The road swooped through rural mountain village to next rural mountain village. Every scene as beautiful as the last. We took a pit stop around 11 after riding off-road for another 4 hours and our guide let us know the end of the slick, orange clay accompanied by slick gravel and shale would soon be coming to an end. My body thanked him. We rode for another 6 hours on paved mountain roads back toward the main highway that brought us there. As the clouds began to give

way, I was overwhelmed by the series of events that had brought me to this place. Aside from feeling quite content about the designs we had produced for the reintroduction of such an iconic brand, I couldn't help but feel so fortunate to have this experience. To literally realize your dreams of standing up on your bike, riding sweeping mountain roads through Vietnam is really something.

I look forward to the future of this brand and hope that in some capacity this recount of our experience evokes a fire within to get up, get your FirstGear® on and go make some memories on some road, somewhere.

# TPG | TECHNICAL PERFORMANCE GEAR

TPG stands for Technical Performance Gear, the perfect outerwear option to add to a rider's base layers creating an optimum microclimate, and our top of the line TPG Rainier and Monarch jackets are waterproof and have breathable outer shells with high-tech features. The outermost fabric is a tough, yet supple, polyester laminate with a 37.5<sup>®</sup> waterproof and breathable barrier. This 37.5<sup>®</sup> laminate significantly improves the comfort and performance of our technical outerwear by using microparticles to accelerate the capture-and-release of moisture vapor, which keeps you cooler when it is warm, warmer when it is cool and, above all, dry. These jackets also have all the protection and details you've come to expect from FirstGear<sup>®</sup>. Crash

protection comes from D30<sup>®</sup> brand armor at the shoulders and elbows. This armor is CE-certified to the highest level of impact protection, EN 1621-1 Level 2, absorbing up to twice the impact energy of other CE-certified protectors. D30<sup>®</sup> brand EVO T5 back armor is supple, breathable and comfortable to wear while still being the most effective impact protection. A high level of abrasion protection comes from an internal aramid panel that starts at the top of shoulder and comes down all the way to the forearm. When the weather turns wet, you have 100% waterproof zippers and a hidden rain hood that fits under your helmet.

- Two-year crash replacement warranty
- Reflective piping from shoulders down to drop-tail
- Five interior pockets and five exterior pockets
- Inner cuff wrist gaiter
- D30<sup>®</sup> elbow and shoulder guards CE certified to EN 1621-1 Level 2
- D30<sup>®</sup> back protector CE-certified to EN 1621-1 Level 1
- YKK<sup>®</sup> waterproof zippers in strategic areas
- YKK<sup>®</sup> two-way front zipper comfort and breathability
- 8 in. rear zipper for attaching to pants
- Five-year limited warranty

 **FIVE YEAR WARRANTY**

# 37.5<sup>®</sup> KILIMANJARO™ TEXTILE JACKET

GREY/BLACK

The FirstGear 37.5<sup>®</sup> Kilimanjaro™ jacket is our newest, high-end, waterproof-breathable shell Performance shell jackets are the perfect outerwear option to add to a rider's base layers to create an optimum microclimate. Our 420-denier nylon outer fabric was chosen for its balance of lightweight, suppleness and outstanding abrasion resistance. Added to that, we have extra abrasion-resistant, 620-denier, nylon at the elbows, upper arms and shoulders. Durable stretch fabric at the shoulders makes for bind-free riding. The 37.5<sup>®</sup> Kilimanjaro™ jacket is named after the 37.5<sup>®</sup> waterproof-breathable barrier. This 37.5<sup>®</sup> laminate significantly improves the comfort and performance of this technical outerwear by using microparticles to accelerate the capture-and-release of moisture vapor, which keeps you cooler when it is warm, warmer

when it is cool and, above all, dry. Water is kept out by the chassis fabric, rolled neoprene collar with hidden, under helmet, hood, storm flaps, waterproof zippers, six arm/wrist adjustments and our drop-tail cut. Featuring D30<sup>®</sup> brand, CE-certified, armor padding at the shoulders and elbows as well as chest panels to provide additional impact protection. D30<sup>®</sup> brand EVO T5 back armor is supple, breathable and comfortable to wear while still being the most effective impact protection. D30<sup>®</sup> is light and flexible with extraordinary energy absorption properties. FirstGear<sup>®</sup> was one of the first to adopt D30<sup>®</sup>, and we are proud to expand our use of this extraordinary technology in the Kilimanjaro™.

# 37.5<sup>®</sup> KILIMANJARO™ MEN'S PANTS

The 37.5<sup>®</sup> Kilimanjaro™ pant is named after the 37.5<sup>®</sup> waterproof-breathable barrier inside. This 37.5<sup>®</sup> laminate significantly improves the comfort and performance of this technical outerwear by using microparticles to accelerate the capture-and-release of moisture vapor, which keeps you cooler when it is warm, warmer when it is cool and, above all, dry. This pant is designed to be worn either as an overpant or a standalone pant and has all the features expected from a high-end technical riding pant for touring, adventure touring and sport touring. The 37.5<sup>®</sup> Kilimanjaro™ Pant utilizes the 420-denier nylon chassis with double layers at the knees, and the inside of the legs have an added abrasion and heat-resistant layer for longer life. The knees are designed

for the riding position and there is a detachable yoke and suspenders that help keep the pants fitting properly and comfortably. With yoke and suspenders removed, there is a special, built-in, pocket for the zipper connection leaving a smooth, clean interior. These pants are up-armored using top-of-the-line D30<sup>®</sup> brand, T5 EVO, knee and hip protectors and both the knee and hip protectors can be microadjusted to fit your body in your riding position. There is also an adjustable lower leg gaiter to help keep out the rain and the cold in extreme weather.

- D30<sup>®</sup> armor at hips and knees are impact tested and CE-certified to EN 1621-1 level 1
- 37.5<sup>®</sup> microparticle tech regulates temperature and humidity
- YKK<sup>®</sup> full-length, double, side zips for easy on and off and maximum venting
- YKK<sup>®</sup> waterproof zippered thigh pocket
- YKK<sup>®</sup> front zipper backed by waterproof gusset
- Timeless five-pocket design with belt loops
- Available in standard, tall and short leg lengths
- Five-year limited warranty

# BASEGEAR

37.5<sup>®</sup> Basegear products derive their name from the patented 37.5<sup>®</sup> microclimate technology. This technology helps keep the rider warmer when it's cold, cooler when it's warm and reduces the humidity that, uncomfortably, builds up between you and your riding gear. 37.5<sup>®</sup> technology is a chemical free process that permanently embeds, naturally derived, active particles in the product fibers. These particles increase the evaporative surface

area by over 800% accelerating your body's own heat-regulating system. Additionally, 37.5<sup>®</sup> particles absorb and re-radiate infrared heat energy given off by your body. 37.5<sup>®</sup> Basegear is the perfect complement to all your riding gear, for all year, in all weather.

A woman wearing a helmet and riding gear is sitting on a motorcycle on a rocky ridge. She is looking out over a vast, arid desert landscape under a dramatic, cloudy sky at sunset or sunrise. The terrain is rugged with sparse vegetation and a winding road in the distance. The overall mood is adventurous and serene.

# WOMEN'S

With the largest growing segment in riding coming from women, FirstGear® remains committed to having quality products that are not just shrunken men's pieces. We strive for fit and fashion that is realistic and appealing without being over the top. At the same time, we offer the same level of protection and functions found in our men's line. Top to bottom we can get you kitted in the right gear for whatever and wherever your ride takes you.

# 37.5<sup>®</sup> KILIMANJARO™ TEXTILE JACKET

The iconic FirstGear® Kilimanjaro™ jacket is upgraded with cutting edge technologies, design and innovative features, including a nylon-shell exterior bonded with a waterproof-breathable laminate, that serve to further its reputation as “the one jacket to have if you could only have one.”

- Waterproof-breathable, 25-layer, PTFE laminate technology is durable and long-lasting
- PTFE laminate incorporates revolutionary 37.5<sup>®</sup> advanced, microparticle technology
- D30<sup>®</sup> armor padding, CE-standard at shoulders, elbows and back pad
- Adjustable waist strap facilitates fit with various layering
- Top shoulder vents with hold-open straps for maximum airflow regardless of riding position

# PANTS

Pants and overpants we have you covered. Our overpants are a staple for the rider who wants to ride protected but not have to stay in riding gear when arriving at their destination. Our dedicated pants offer top level armor in a style that is modern without being over bulky. Pack light by packing right. Riding pants make that possible.

## KATHMANDU PANTS

The lower half of our amazing jacket of the same name. Includes many features you'd find on pants at 4x the cost. With tall and short sizes available, there are very few riders it cannot fit. Ride year round with Kathmandu.

- 300-denier, high-density nylon shell with Hypertex® treatment
- Fully removable full, salopette style suspenders
- D30® armor at knees and hips
- Removable insulated liner
- Sueded exterior inner knees for effective grip
- Five-year limited warranty

# 37.5<sup>®</sup> KILIMANJARO™ TEXTILE PANTS

The 37.5<sup>®</sup> Kilimanjaro™ pant is named after the 37.5<sup>®</sup> waterproof-breathable barrier inside. This 37.5<sup>®</sup> laminate significantly improves the comfort and performance of this technical outerwear by using microparticles to accelerate the capture-and-release of moisture vapor, which keeps you cooler when it is warm, warmer when it is cool and, above all, dry.

This pant is designed to be worn either as an overpant or a standalone pant and has all the features expected from a high-end technical riding pant for touring, adventure touring and sport touring.

The 37.5<sup>®</sup> Kilimanjaro™ Pant utilizes the 420-denier nylon chassis with double layers at the knees, and the inside of the legs have an added abrasion- and heat-resistant layer for longer life. The knees are designed for the riding position

and there is a detachable yoke and suspenders that help keep the pants fitting properly and comfortably. With yoke and suspenders removed, there is a special, built-in, pocket for the zipper connection leaving a smooth, clean interior.

These pants are up-armored using top of the line D30<sup>®</sup> brand, T5 EVO, knee and hip protectors and both the knee and hip protectors can be microadjusted to fit your body in your riding position. There is also an adjustable lower leg gaiter to help keep out the rain and the cold in extreme weather.

- D30<sup>®</sup> armor at hips and knees are impact tested and CE-certified to EN 1621-1 level 1
- 37.5<sup>®</sup> microparticle tech regulates temperature and humidity
- YKK<sup>®</sup> full-length, double, side zips for easy on and off and maximum venting
- YKK<sup>®</sup> waterproof zippered thigh pocket
- YKK<sup>®</sup> front zipper backed by waterproof gusset
- Timeless five-pocket design with belt loops
- Available in standard, tall and short leg lengths
- Five-year warranty

## MEN'S

## WOMEN'S

A photograph of a winter landscape. A paved road with white dashed lines runs through the center, flanked by snow-covered evergreen trees. The sky is overcast and grey. The overall color palette is cool, dominated by blues, greys, and whites.

# COLD WEATHER

We are the last of the original heated clothing makers, our partner Warm & Safe has a trusted reputation for reliable and consistent heated gear. We recommend wearing it as a mid-layer with just the outer shell jacket on top. It should fit snug but not tight. So just the long sleeve base layer or regular shirt is all you need. Ride all year as long as the roads are clear, or use it on your sled, ATV or SUV. Just check your vehicle specs to make sure you can power it properly.

# HEATED 90-WATT MEN'S JACKET LINER

BLACK

GREY

The classic Heated Jacket Liner that's been keeping riders and passengers warm for years. Form-fitted to be worn close to the body for optimal heat transfer. Liners built to be temperature neutral to allow wearing when active heating isn't necessary.

- Integrated wiring connections for gloves
- Packs into its own zippered pouch
- Two-year limited warranty

# SWAGMAN MEN'S GLOVES

Hands are one of the areas most affected when riding in cold, blustery weather. Extend your riding season with the windproof FirstGear® Swagman Gloves—designed for barrier protection and exceptional comfort. Constructed of a unique mix of breathable materials, with a gauntlet to block air from jacket sleeves, the Swagman Gloves keep your hands warm in the windiest conditions.

- Windproof, water-resistant barrier on top of hand with a hint of stretch for maximum comfort
- Nubuck-leather palm provides outstanding grip and resists wear
- Light anti-vibration padding on palm heel for added comfort without extra bulk
- Reinforced thumb-forefinger junction for longer wear
- Notched wrist-length gauntlet can be worn under or over jacket cuffs
- Pull tab for ease of entry
- Two-year limited warranty

# RAIN GEAR

Sometimes the best defense against the elements is to just cover everything up and keep riding. Our rainsuits are perfect to carry in a stash bag or tankbag. Quality made and with contemporary designs to avoid going "Full Banana" down the highway. Ride in the rain and stay dry doing it.

# SIERRA RAINSUIT JACKET

INTEGRATED JACKET  
STUFF SACK

Powerful DayGlo color provides outstanding visibility in low and rain-obscured lighting conditions. Fully seam-taped and easily stuffs into its own stuff sack, the Sierra is ideal for commuting and a great choice for long, wet days on the saddle.

- 100% waterproof-breathable with fully taped seams
- Rain hood stuffs into collar
- Snap front storm flap
- Stores in its own integral stuff sack
- Two-year limited warranty
