Ultimax Drive Belts

Ultimax XS

Knowledgeable snowmobilers agree - the drive belt of choice for high performance is Ultimax XS. XS is designed for high horsepower sleds and delivers superior performance and longer belt life. XS features a specially formulated rubber compound found in no other snowmobile belt. Tests prove that XS transfers more power and runs cooler. For high performance sleds, capture the power with Ultimax XS.

ULTIMAX PRO

The new Ultimax Pro belt features a thicker cross section so more surface area contacts the clutch. This means less slippage over a broader speed range for quicker acceleration. The new cog design dissipates heat and aids flexibility. Cooler running belts mean better performance and longer lasting belts. Run cool, run long, run fast with Ultimax.

Ultimax MAX

The Max belt is designed for general service machines 500cc and under. The new Max has an improved cog design for greater flexibility and cooler running. The new thicker Max has added strength that provides longer belt life.

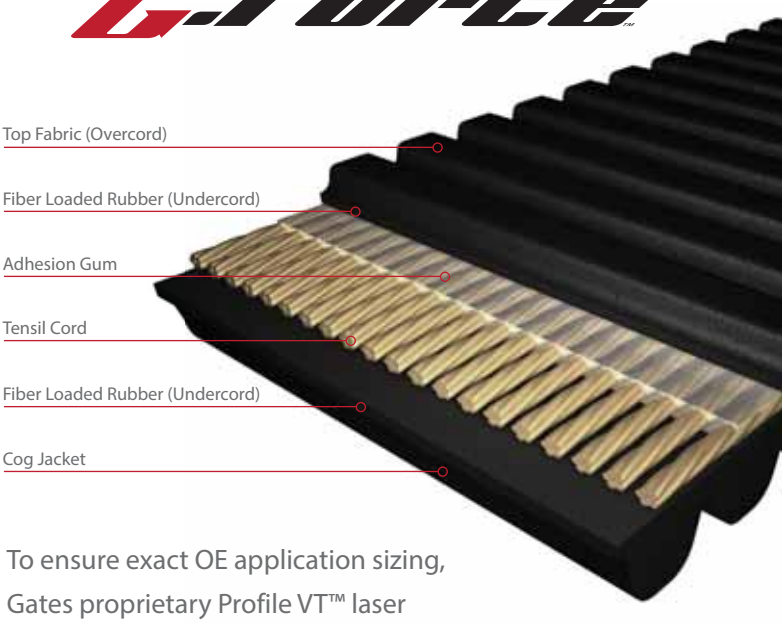
G-Force™ CVT Belts

A Breakthrough in CVT Belt Design.

G-Force™ is the first of a new generation of double cog Continuously Variable Transmission (CVT) belts.

G-Force drive belts are designed for today's recreational and utility all-terrain equipment. Whether trail riding, farming, ranching or extreme power sports, G-Force belts are engineered for drop in performance on demanding off-road conditions.



To ensure exact OE application sizing, Gates proprietary Profile VT™ laser measuring technology is used in both product development and manufacturing.

From ATVs, to Snowmobiles, Scooters and Mini Cars, Gates continues to lead the way in CVT belt innovation, technology and development.

HD Recoil Starter Ropes

- OUTER COVER: The outer cover has a higher density than the standard rope which provides an increased resistance to wear.
- INNER CORE: Double filament braiding provides superior strength (34 000 Dtex).
- FIRMNESS: Maintains its firmness through the years and will retain its original diameter without taking additional elasticity as it is the case for traditional ropes.
- NYLON : This rope is made of Nylon 6 which is highly resistant to abrasion, chemicals such as acids and also UV rays.

Kit Digital Multimeter & Voltage Peak Reading DVA Adapter

- Digital Multimeter: Maximum Voltage (terminals to ground): 600V
- Fuse Protection: 200mA/250V
- Wires length: 700mm
- Portable 31/2 digital multimeter
- Measures DC and AC voltage, DC current, resistance, diode, transistor, with an audible continuity test
- Made with the highest quality materials
- Very high accuracy

How it works:
A DVA adaptor is also known as a peak reading adaptor. Small engine ignition systems use permanent magnets to make electricity. This electricity travels down the wires very quickly and in "spikes" so to speak. What a DVA does is capture those "spikes" and allows a standard digital multimeter to read those voltages. Without a DVA adaptor, a multimeter will either record a low voltage or no voltage at all. Power sport ignition systems work on "peak" voltages, which is why a DVA is known as a "peak reading" adaptor. Multimeters read average voltages, not peak, so that is what our adaptor allows you to do.

285037	Digital Multimeter Kit	E

- Easy installation, only two wires to connect and a 3M adhesive pad to fix the voltmeter
- Lightweight
- Indicate voltages between 11V-16V
- Waterproof anodized black plastic case
- Can be attached to almost all components of your vehicle, including your steering wheels

Harness Accessories

Harness Override Plug Connector

On the new Can-Am and Polaris models, the computer system knows when you are not wearing your seatbelt and will interrupt the ignition. This override plug connector bypasses the system, preventing your vehicle from going in limp mode.

- Plug-and-play, direct fit, easy installation
- Allows for use of 4 or 5 point harnesses

FireStik®

StrobStick

StrobStick
(for Strobe Ready Firestik)

Firestik LED safety flags utilize a unique multi-purpose strobe light for use in a variety of emergency, safety, signaling or identification applications. The multi-function strobe, called StrobeStik, provides safety lighting for off-road recreation, mining, construction, highway safety, police, search and rescue, camping, hiking, backpacking, hunting, kayaking, boating, personal safety and more. The possible applications are limited only by the imagination. StrobeStik's 1 watt LED is powered by a single "AA" battery. The "AA" is the most recognizable and commercially available battery in the world, allowing for inexpensive and convenient battery replacement. Typical battery life, using the leading discount store alkaline, ranges from 8 to 100 hours depending on the user-selected mode.

The 6 Strobestik modes are:

MODE 1 : No light or strobe. Battery saving off-mode.
MODE 2 : Solid-on - Stays lit; no strobing action. Continuous operation of 8 hours.
MODE 3 : Slow Strobe - One flash per second capable of over 100 hours of continuous operation.
MODE 4 : Fast Strobe - 2.7 flashes per second for 25+ hours of continuous operation.
MODE 5 : Triple Flash Strobe - 3.8 flashes per second for 20+ hours of continuous operation.
MODE 6 : Random mode - 30+ hour run-time; random flash pattern designed to reduce habituation behavior.

Safety Flags

Safety Flags

100% Oxford polyester orange safety flag mounted on a flexible 3/8" fiberglass rod. The colorful PVC shrink tubing protects each rod from sun-splintering and deterioration, in addition to providing increased durability and enhanced color visibility. Our special composite blend of fiberglass and resin makes our rod the most durable choice for any safety flag application. The 3/8"-24 threaded base is compatible with a large variety of brackets, mounts, springs, quick disconnects and other mounting hardware. Flag is removable and/or replaceable and rotates freely on the rod. Strobe Ready: Firestik StrobeStik-Ready safety flags are outfitted with a ¼"-20 threaded brass adapter that is compatible with the FireStik StrobeStik LED strobe light.

StrobStick

(for Strobe Ready Firestik)

Firestik LED safety flags utilize a unique multi-purpose strobe light for use in a variety of emergency, safety, signaling or identification applications. The multi-function strobe, called StrobeStik, provides safety lighting for off-road recreation, mining, construction, highway safety, police, search and rescue, camping, hiking, backpacking, hunting, kayaking, boating, personal safety and more. The possible applications are limited only by the imagination. StrobeStik's 1 watt LED is powered by a single "AA" battery. The "AA" is the most recognizable and commercially available battery in the world, allowing for inexpensive and convenient battery replacement. Typical battery life, using the leading discount store alkaline, ranges from 8 to 100 hours depending on the user-selected mode.

The 6 Strobestik modes are:

MODE 1 : No light or strobe. Battery saving off-mode.
MODE 2 : Solid-on - Stays lit; no strobing action. Continuous operation of 8 hours.
MODE 3 : Slow Strobe - One flash per second capable of over 100 hours of continuous operation.
MODE 4 : Fast Strobe - 2.7 flashes per second for 25+ hours of continuous operation.
MODE 5 : Triple Flash Strobe - 3.8 flashes per second for 20+ hours of continuous operation.
MODE 6 : Random mode - 30+ hour run-time; random flash pattern designed to reduce habituation behavior.

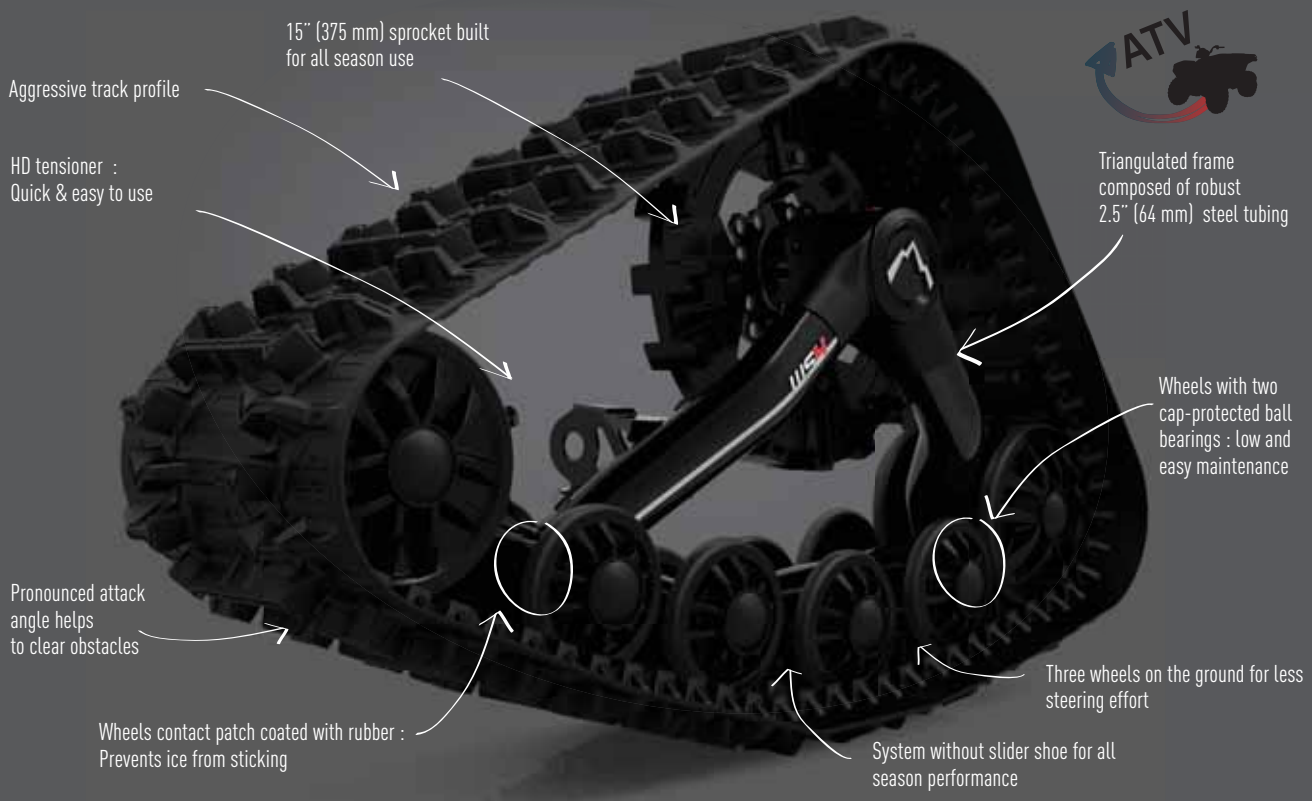
THE « COMMANDER » IN CHIEF

REDEFINE AGILITY & CONTROL



The WS4 is the logical continuation of our "Commander" series, with reduced driving effort, decreased vibration and same traction capability as always for the best performance in all 4 seasons. Of course, the same sturdiness is maintained through a 2.5" tubular frame and an overall lightweight necessary to surf on snow.

Why limit yourself when you could drive a WS4 "Commander"!

MOSFET VOLTAGE REGULATOR RECTIFIER

Stop Burning your Regulator Rectifier!
It is time to update or replace your voltage regulator with the advanced MOSFET type. It runs cooler than all OEM diode style regulators. In addition, this rectifier has overheat protection, rather than burn up it will simply turn off for a while and cool off.

WHY USE MOSFET ENHANCED TECHNOLOGY?

Runs cooler : Runs much cooler than the traditional Shunt voltage regulator rectifier.

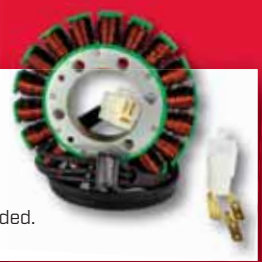
Saves gas : Less load on the stator, less work, less fuel is used and you save.

Regulated energy : The power charging your battery is steadier and smooth.

Extended battery life : Extends the battery's life and cold cranking capacity.

More engine power : Removes stator load resulting in more engine power.

Optimized power : Optimize power delivery by switching the stator coils on or off.



STATOR

Copper windings resistant to 200 degrees Celsius. Pick up pulsar coil included. Connector included. Rubber grommet included.

REPLACEMENT IGNITION COIL

1 cap coil included. With certain motorcycle models, the spark plug caps and coils are combined to reduce the number of parts used in order to improve efficiency. However, when the spark plug cap wears out, the cost of the replacement becomes more expensive. If you are experiencing ignition problems this could mean the ignition cap coil needs to be replaced. Simple, easy to install, affordable, and improves engine performance.

HIGH PERFORMANCE CDI BOX

Clients are buying this part for performance : Great add-on with an aggressive timing curve and increased rev limiter.

Please Note : *The only real way to test your CDI box is to swap it out with another known good unit from the same year/make/model. Because of this, we recommend that you rule everything else out before replacing the CDI box.*

IGNITION KEY SWITCH

Two keys included. Connector included.

**** Please keep in mind that if you install this key switch in your vehicle and it's still not starting then it's very likely that the key switch was not your problem to begin with.***

- You must re-install your original grommet and the new connector
- Once your connector and grommet is re-installed, our part becomes a Plug-and-play unit, direct fit, and very easy to install
- Highest grade lamination materials
- Highest grade copper windings, resistant to 200 degrees Celsius
- All product shipped are tested

Advice: Battery condition is extremely important. No stator can work correctly with a bad or weak battery. Always fully charge your battery before performing any charging system tests or replacing parts. If there is any doubt, have the battery load tested or replaced.

Brake Pads

Kimpex Semi-Metallic brake pads are a good quality price formula. These brake pads will offer good brake feeling. They contain 12% of yellow copper. The semi-metallic brake pads offer a quiet braking noise. These brake pads will be used for ATV in normal condition.

Kimpex Ceramic brake pads have a formula that will give better performance than the Semi-Metallic. They contain 20% of Kevlar fiber, red copper and Nano material.
The Kimpex ceramic brake pads will make less dust than the semi-metallic brake pad.

Kimpex Kevlar/Carbon brake pads are high quality performance pads. They contain 65% of Kevlar fiber, electrolytic red copper powder and Nano material. These brake pads are using in severe conditions like motorcycle racing. These brake pads have very long life duration and higher braking coefficient. They resist better to high temperature.

Kimpex Oil Filters

Oil Filters

- Filter material is a composite of paper pulp, other fibers and resins, which are processed to produce extra thickness and density to provide High Filtration Yield.
- Filter material is fluted to its maximum or to the O.E required numbers; the higher the number of fluting, the higher the filtration efficiency.

How to read the Sprocket Charts

1. Select desired model from the application chart referring to the Make, Model, Year column.
2. Stock size gearing of desired model is listed in column OEM Gearing.
3. All sprockets listed between top and bottom division lines fit selected model. Simply choose preferred ratio from selection guide column and than choose desired R.O.C. sprocket from the appropriate column to the right.

Sprocket Gearing Facts

Gearing selection can affect acceleration, top speed and even handling.

By changing front and rear sprockets you can alter your bike's final drive ratio, which in part determines when speed for a given rpm. Gearing ratio refers to the ratio of the rear to front sprockets. For example, a stock Suzuki GSXR600 has a 16 tooth front sprocket, and a 45 tooth rear, for a ratio of 45/16, or 2.81. Substituting a larger front or smaller rear sprocket lowers the ratio (sometimes called "taller" gearing), resulting in more speed for a given engine rpm. Likewise, a small front or larger rear sprocket gives less speed for a given rpm ("shorter" gearing).

Performance numbers can be enhanced by sprocket selection to a certain extent, but the overriding factor is your engine's power and its characteristics. Choosing the correct gearing optimizes your powerband usage, maximizing power delivered to your rear wheel for the given conditions.

Speed for a given set of sprockets is determined as follows:
Speed = (rpm X rear tire circumference X front sprocket) / (primary gear ratio X sixth gear ratio X rear sprocket X 1056)

Stock bikes are generally geared to reach their top speeds at just below their peaks in top gear.
Changing to something like 44/17 on GSXR600 would actually reduce top speed, because in sixth gear the engine would spin much slower and not make enough power to pull its top speed. Shortening the gearing to 46/15 would have the GSXR600 passing its power peak early, also resulting in a slower top speed. However, this is where sprocket selection can be advantageous: at a given road speed, and in a given gear, shorter gearing will have the motor spinning faster, where more power is available.

A popular modification is to replace a stock machine's 530 or 525 chain with a thinner and lighter 520 series chain and matching sprockets.
