SUMPGUARDS, TANKGUARDS AND DIFFERENTIAL GUARDS

Made from a special aluminium alloy, these sumpguards have several functions: they protect the mechanical parts such as sump, gear-box, transmission etc. and they also contribute to stiffen the whole body and the front part of the car. For this reason they are suitable for every day use and are particularly useful for those driving on uneven roads.

TYRE WARMERS

A line of tyre warmers available in 4 different standard sizes, offering greater versatility across a wider range of tyre sizes and now available in two types: with a standard temperature control thermostat or with a central electronic temperature control box.

Interior: Nomex®.

Exterior: Cordura® which improves transpiration allowing moisture to escape away from the tyre.

Electrical cables and connectors are compliant with EEC electrical standards.

Upon request, tyre warming blankets can be made to measure. Tyre warmers for motorcycles are also available upon request.

Tyre warmers models with a Central Electronic Temperature Control Box (part number T200) allows each of the 4 tyres to have individual temperature settings. The control box features an electronic control device controlled by software preventing overheating. The external case of the control box is ABS plastic with an electrical protection rating of IP44.

Tyre warmers models with a Standard Temperature Control Thermostat allows the tyre surface to reach 70/80 °C. The time required to reach this temperature is depends on ambient temperature, tyre dimensions and operating conditions.
