ABOUT US

Since 1999 ORACLE Lighting has been developing custom lighting solutions using the latest in CCFL, Xenon, LED, SMD, and COB Lighting Technology. Our staff is not only trained on basic product knowledge, but also to understand the processes in which our products are built, the principals of how they operate, and the proper technique of installation.

Since we specialize in lighting (and only lighting) we are always happy to spend that extra bit of time explaining the principals of lighting and helping our customers understand what separates our products from some of the others out there.

For the past SEVEN years consecutively INC Magazine has listed ORACLE Lighting as one of the fastest growing privately held companies in the entire United States on the Inc.500-5000 List.

In 2012 ORACLE Lighting received a bronze American Business Award for "Consumer Products Company" of the year. In 2013 we were named "Small Business of the Year" by JEDCO, named "Exporter of the Year" by the U.S. Small Business Administration, and named a "Small Business Champion" by the U.S. Senate Committee for Small Business and Entrepreneurship awarded by the Committee Chair; Senator Mary Landrieu.

The resolute principals and solid foundation on which this company was founded has allowed for our organic growth, yet we have always stressed that we can only be successful by delivering quality products at fair prices and respecting our customer base. We have recently elevated our own standards when, in 2012, we made a commitment to use only USA made LED chips in our Solid-State products. LEDs Made in the USA have higher lumen efficiency, are more dependable, and have a longer overall lifespan. We are committed to exceeding our customers' expectations & staying on the cutting edge of lighting technology.

PRE-ASSEMBLED HEADLIGHTS

Pre-Assembled headlights are great for customers that do not want to open their existing headlights to install a halo kit. These headlights come pre-assembled with ORACLE halos professionally installed. We offer these lights for almost every make and model and we are constantly adding new vehicles. Our Pre-Assembled Headlights have either Chrome or Black Headlight Housing depending on your choice. In addition to pre-assembled headlights we also offer matching halo fog-lights. Pair both of these items with an ORACLE wireless controller for a perfect lighting package.

RETROFIT PROJECTORS

TL 2.5" D2S RETROFIT PROJECTORS

The Acura TL Bi-Xenon Projectors are widely popular in HID retrofitting applications. These projectors are considered one of the best performing projector assemblies available on the market. The Acura TL projectors come with crystal clear ZKW-R lens. Instead of a "fuzzy" light dispersal, caused by low end lenses, these lenses create a distinct cut-off pattern (where the light output meets the top of the lens). Resulting in razor sharp and vibrant light.

FX 2.5" RETROFIT PROJECTORS

This projector system is an improved version of the OEM Infiniti FX35 Projector. Instead of an OEM lens, the FX Projectors come with a clear lens from the Acura TSX. This projector has a built in solenoid that changes from Xenon Low Beams to increased output Xenon High Beams. These are the best current compact Bi-Xenons out on the market. Housing has mounting tabs for an easier retrofitting process.

This projector bolts right into the pre-existing hole in the back of your reflector bucket with little to no modification. The 70mm H1 offers amazing light output, the most precise sharp cutoff line, and non-existent glare.

With its table-top light spread design, this projector is compatible with D2S and D2C bulbs, and produces a very sharp, attractive cut-off line (Vibrant band of colors across the top of light cut-off line). These projectors are very easy to install with a virtually no modification

INTERIOR FLEXIBLE LED STRIP

SIDE FIRING FLEXIBLE LED STRIP

The light output on these strips display sideways instead of forwards. Meant to be placed in areas where you don't want the led strip to be visible, but want the light to peek through. Good for tight areas and small enclosures. The side-firing LED strip is used in applications where the light needs to shine parallel with the mounting surface rather than perpendicular with the mounting surface like normal LED strip.

Part# 3801

LED Type:	Side Firing LEDs
Quantity:	Sold by the Foot or 200" Spools
Input:	Direct 12V Wiring
Wattage:	1.5W per Foot
Backing:	3M Adhesive
Waterproof Rating:	IP65
Customization:	Can be cut to smaller lengths
Warranty:	Lifetime

ORACLE LED strip maintains high-end double-layered P.C.B circuit boards. Double Layer circuit boards have better heat dissipation and thermal properties which results in longer LED lifetime, durability, and overall reliability.

INTERIOR FLEXIBLE LED STRIP

Our "interior" flexible strip is most commonly used on projects where the lights will not come in contact with water or moisture. The absence of the waterproofing material allows the strips to fit into tighter spaces, become slightly more flexible, and are less expensive than the waterproof version.

Part# 3802

EXTERIOR FLEXIBLE LED STRIP

EXTERIOR FLEXIBLE LED STRIP - WHITE BACKING

Our waterproof LED strips have an IP65 rating and are suitable for exterior or outdoor applications and areas subjected to high heat. For the waterproofing material we use a high grade silicone rather than epoxy. The reason is that epoxy is not as flexible and tends to yellow over time. For your convenience we offer 2 different color circuit boards- white and black. This helps conceal the LED strips in different types of applications.

Improve Visibility, Night-time Safety, Light Output, Styling, and add Value to your Vehicle with ORACLE Lighting Premium HID Kits.

ORACLE Xenon Conversion kits were developed with strict standards and the latest technology available on the market. Each ORACLE HID Kit includes our slim fully DIGITAL ballasts and a "Plug and Play" wiring harness for ease of installation.

Our Xenon Conversion Kits are so rugged that the Ballasts and Wiring can be completely submerged in water and continue to operate without failing.

The new "Plug and Play" wiring makes this installation as simple as changing your headlight bulbs and simply plugging in the Xenon Light Computers. ORACLE digital ballasts are equipped with new processors that have a startup of a much more efficient 6 amp compared to the industry standard 10 amp. Also the relays on the "Plug and Play" harnesses were enhanced up to 60 amp from the industry standard 40 amp.

These changes are what makes ORACLE HID Kits an even higher quality and once again increased the standards of what makes a "Premium" kit different from the others out there.

HID COMPONENTS

ORACLE AC Ballasts convert the incoming 12V DC power into High Voltage AC Power that ignites and maintains a smooth and consistent stream of energy to the bulb. Our Alternating Current (AC) ballasts are more stable, have a faster start-up, and prolong the bulb's life.

35W CANBUS HID BALLAST

Part# 5906

The key component of all HID ballasts is the "controller" which controls all functions from the initial ignition to continually ensuring the xenon gas inside the bulb stays ignited. The quality of every ballast starts with the controller inside.

Our new 35W CANbus Ballast contains an ASIC chip controller.

The ASIC chip and integrated decoder circuit make this ballast compatible with any vehicle and can fix most of HID installing issues such as fault indicator lights, and bulbs flicking during operation. This special processor is made with powerful components of real-time lamp-monitoring & power compensation with full-time ballast protection circuitry.

Fits: 9003, 9004, 9005, 9006, 9007, 9008, H1, H3, H4, H7, H8, H9, H10, H11, H13

ASIC chip and integrated decoder circuit is visible on every ORACLE 35W CANbus ballast.

HID REPLACEMENT BULBS

The main complaint about HIDs is that they blind other drivers. Well, if your lights are blinding people that means that the illumination is not on the road where it needs to be. The reason that many other aftermarket HID bulbs blind other drivers is because of non-accurate bulb geometry.

Factory headlights are designed so that the light hits the mirrored facets at certain angles to accurately project light onto the road. Other aftermarket HID bulbs commonly use a generic bulb that is re-based to fit different types of sockets and therefore does not project light accurately.

ORACLE bulbs are engineered to replicate the effects of the factory bulb and maintain accurate bulb geometry which puts light on the road instead of into on-coming traffic.

OE HID REPLACEMENT BULBS

Whether you are replacing a bulb that is no longer working or just want to change the look of your factory HID lights, these bulbs are the answer. Dealerships may charge a high price for a single replacement HID bulb. ORACLE Factory HID bulb replacements are accurately manufactured to match OEM fitment. When changing your factory HID bulbs with ORACLE OE replacements, it is advisable to change both bulbs at the same time. Years of use of a factory HID bulb can cause the bulb to change color and not match the new ORACLE replacement bulb.

OFF-ROAD CURVED LED LIGHT BARS

ORACLE Lighting now offers the CREE powered 50", 52", and 54" Light Bars in a Curved Housing Option. These LED light bars transform the common rectangular light bar style into a curved style, matching the curved styling of most vehicles and offering a wider light dispersion without sacrificing forward firing distance. These light bars are perfect for off-roaders needing both forward and peripheral light dispersal, while eliminating the necessity of adding multiple light bars for this desired effect. These light bars contain both flood and spot optics for optimal light dispersal.
