Valve Installation Instructions

ProX Titanium Engine Valves are manufactured to the highest quality standards and specifications. By using the latest state of the art Titanium material and coating, the valves have improved properties over the original item. We would like to support you to achieve maximum durability. Titanium is a very exotic material which requires you to work after following installation instructions.

Installation instruction

- Do not touch the valve surface with your bare hands, use gloves or pre lube the valve with engine oil, these precautionary measures will reduce the risk of corroding the coating.
- Never** use a lapping compound on a new valve, take a dummy valve to do this grinding operation.
- Please take notice; during every rebuild the valve seats must be machined, this to assure a 100 % valve to seat contact and making the seat free from the hardened shell. The width of the contact zone on a valve seat with the valve face should be at least 1mm. In general the angle is 45°, however consult the O.E.M. specification first.
- New valve seats should be soft, material as Nodular Iron, Bronze, or Beryllium-Copper, all heat treated to Rockwell, RC32 or less. Most of the original valve seats used in combination with titanium valves are made of such an alloy.
Attention: After every rebuild the seat is getting thinner which makes the heat transfer worse, increasing the natural hardening process. The back set position of the valve (Recess) after every time one machines the valve seat, worsening the engine's breathing. Besides of reducing the engine's efficiency this also effects the cooling down effect negatively.
- Use only original valve springs or ones with forces not exceeding the originals.

CLUTCH BASKETS & CLUTCH DAMPENER SETS

(O.E.M. REPLACEMENT CLUTCH BASKETS)

ProX offers a complete line of clutch baskets kits for the Dirtbike and ATV segment. The **ProX** clutch baskets are manufactured from mainly forged 7075 alloy, like the material used in the aircraft and aerospace industry. The use of this material offers improved strength over the OEM die-cast alloy baskets. The **ProX** clutch baskets are machined to exact OEM specifications and tolerances for perfect fit. The complete surface of the baskets is hard anodised for higher mechanical properties and resistance for impact and fatigue. Most clutch baskets come complete with fasteners and damper rubbers for easy installation. The **ProX** baskets will work together with other **ProX** clutch components as well as OEM clutch components. A full line of **ProX** clutch baskets for Dirtbike and ATV models is available from stock.

DRIVE CHAINS

ProX has developed a premium line of Roller Chains to team up together with the ProX front and rear sprockets. The ProX Roller Chain is a top quality chain, exclusively manufactured for ProX by the reputable and leading OEM factory in Japan.

All ProX chains are made using highest grade Japanese steel. The MX chains are assembled out of various different component that all have their specific and crucial function to make the chain a high quality product.

Specifically for the Offroad, Enduro, ATV and big 4-Stroke Motocross bikes ProX also offers a lightweight, narrow type X-Ring chain using a QX-type seal offering 40% less friction and at least 150% increased durability over a standard MX Chain.

All ProX chains are pre-stressed and pre-stretched to reduce initial chain stretch and immediate performance and come with a clip type chain link as standard.
