# Defence & Comfort 2015

High performance motorcycling outfits and accessories

## rukka 5 year warranty

### 🇬🇧 ACTIVE SAFETY THROUGH ENHANCED COMFORT

Rukka motorcycling garments are designed and manufactured according to the Rukka Defence & Comfort performance standards to meet even the strictest criteria set for weather-proofing and riding comfort.

All Rukka motorcycling garments carry the patented Rukka Air protectors. The only patented breathable shoulder, elbow, knee, shin and hip protectors in the market meet the CE norm EN 1621-1 2012 and function equally in all weather conditions. The elastic protector divides the possible impact into a wide area and acts as a shock absorber.

With the reflective materials, Rukka introduces another feature for enhanced safety. Under normal daylight conditions, these Rukka materials appear "normal", but if directly lit by vehicle headlights in the dark, they reflect the light glaring white.

Each outfit functions best in a defined comfort area. Either hot or cold, rainy or sunny - various technologies are benefitted for various riding conditions. Appropriate underwear, accessories and technology solutions enhance the individual experience.

### RUKKA WARRANTY

Rukka gives a warranty for five years (two years for accessories) from the date of purchase against faults in material or workmanship in the motorcycle outfits. In such cases Rukka will either repair the garment or replace it. The warranty does not cover normal wear and tear, misuse or faulty care. Save your sales receipt – the date of purchase and point of sale printed on it are required to claim the warranty. To claim a warranty please contact the store where you bought the product.

Please note that only cleaned items can be handled. Should the garment need washing the laundry costs will be charged.

## Rukka D3O Air System

 D3O and Rukka worked together to develop a unique D3O material only for Rukka which was then used in the production of an exclusively designed range of Rukka limb, back and chest protector components.

### PATENTED, CE APPROVED AND BREATHABLE PROTECTOR

D3O Air is a patented protective material that combines enhanced chemistry with product engineering to produce high performance shock absorption and impact protection solutions.

A brand New D3O Air material has been developed especially for the Rukka protectors. This New material has some unique characteristics that provide enhanced versatile and flexible protection.

### THE BENEFITS OF D3O AIR:

- High performance shock absorption
- Trusted protection
- Maximum flexibility
- Extremely comfortable
- Tested according to CE-standards

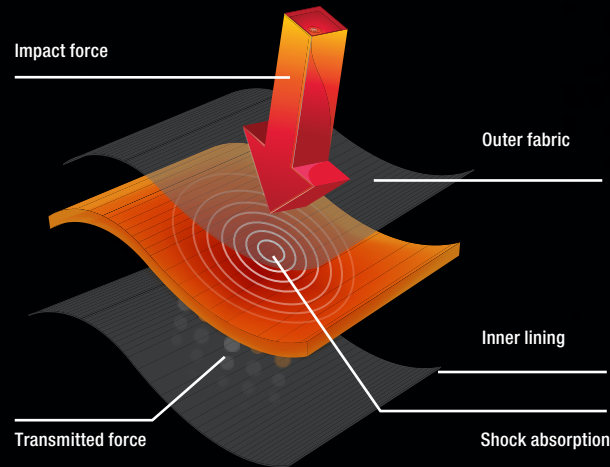

## HOW D3O AIR WORKS

### WIE FUNKTIONIERT D3O AIR MITEN D3O AIR TOIMII

The material contains intelligent molecules that flow freely when moving but on shock lock together to absorb impact energy, instantly returning to their flexible state.

D3O Air does not go hard when hit, the molecules lock together to absorb and spread the force, significantly reducing the effect of impact.

D3O Air disperses the force of impact, drastically reducing transmitted force and minimizing the risk of injury or equipment damage.

The protective qualities are retained after repetitive impact.

Comfort, flexibility and protection are always present.

## UNIQUE PROTECTION, COMFORT AND FUNCTIONALITY

Gore-Tex Pro for 100% water- and windproofness, durability and breathability.

Water- and windproofness and breathability are guaranteed by 3-layer Gore-Tex Pro with Armacor product technology. This advanced material mix achieves excellent tear and abrasion resistance and thereby exceedingly good protection.

3-layer Gore-Tex leather laminate with 1,2 mm bovine leather outer material. The only durably waterproof, breathable leather material for Motorsports apparel.

More passive safety with a comfortable waterproof, windproof and breathable Rukka RVP Laminated Stretch Cordura material.

Waterproof YKK -Aqua Seal front zipper.

Gore Lockout Closure; a simple, toothless, easy to use and durably waterproof front closure system.

The ArmaProtection technology also benefits the temperature-regulating Outlast material, thus contributing to a comfortable thermal balance. Outlast absorbs and releases warmth according to the wearer's individual needs acting as a temperature-balancing buffer.

AirCushion System on the inside of the seat area reduces condensation and acts as a climate buffer. Enhances comfort on long rides. Keprotec Antiglides stops annoying sliding over the seat.

The patented breathable Rukka Air protectors for maximum active and passive safety.

Reflectors as standard.

### ENHANCED COMFORT EVEN FOR HOT RIDING CONDITIONS

AirPower Technology benefits Cordura AFT material, that has been developed by Rukka in collaboration with DuPont to meet the safety standards for motorcycling. High-performance polyamide fibres form the basis of a lightweight, extremely tear- and abrasion-resistant design. The Cordura AFT uses a knitted mesh structure that is experienced especially comfortable when riding in hot climate.

Detachable Gore-Tex inner jacket and inner trousers for durability, breathability and 100% water- and windproofness.

Temperature regulating Outlast material.

The patented breathable Rukka Air protectors for maximum active and passive safety.

AirCushion System on the inside of the seat area reduces condensation and acts as a climate buffer. Enhances comfort on long rides. Keprotec Antiglides stops annoying sliding over the seat.

3M Scotchlite reflectors as standard

Extra warmth and weather protection for colder riding conditions

GORE-TEX® GLOVES WITH

# 2 in 1 TECHNOLOGY

User can change between direct grip and warmth

Two different chambers offers an easy and convenient change between direct grip and warmth. In the warm chamber the insulation provides optimum warmth over all sides of the fingers. In the grip chamber the insulation is only on the back of the fingers. This means high tactility and increased breathability.

Not too hot...  
Not too cold...  
But just right.

Outlast Temperature Regulation stores and releases body heat. It works to keep the wearer's temperature not too hot... not too cold... but just right, over a broad range of environments and activity levels. When your activity level or the outside temperature increase, the Outlast thermocules that contain the phase change paraffin begin to change from a solid to a liquid which provides you with a comfortable sensation of thermal equilibrium. The energy required to activate this process comes from your warm body or the rising ambient temperature. When you begin to cool down, Outlast thermocules begin to change back from a liquid to solid. In this phase change, the energy that was absorbed by the thermocules while you were active is returned to you. With the new moisturetransferring material Outlast functions in active use too.

### OUTLAST VS. TRADITIONAL PRODUCTS

Too hot

Too cool

Outlast products

Traditional products

Outlast Temperature Regulation stores and releases body heat. It works to keep the wearer's temperature not too hot... not too cold... but just right, over a broad range of environments and activity levels.

Elastic material ensures the best possible functionality. Windproof microlayer on front of the jacket, and fleece inner surface keeps you warm even under extreme weather conditions. Fleece transfers the body's extra moisture away from the skin making the wearer feel comfortable.

- 100 % windproof
- Water repellent
- Breathable
- Comfortable in various weather conditions

The blue areas show that this fabric cannot withstand wind. Although the outside temperature remains the same, you will quickly start to feel cold. This is the windchill effect.

The red areas show that the Windstopper fabric can block the wind.

You remain comfortable and warm and can maintain your level of physical activity.

Underwear to protect against wind. Front covered with Gore Windstopper. Other parts made of lightweight 100% polyester allowing the body moisture to pass away from the skin creating ideal body temperature balance and comfort during the riding.

100% WATERPROOF • 100% WINDPROOF • DURABLE • BREATHABLE

### GORE-TEX

- 100% Waterproof - Even under high pressures the waterdrops cannot penetrate the membrane. Your body remains dry.
- 100% Windproof - The wind is caught into the structure of the membrane. You stay warm.
- Durable
- Breathable - Body moisture escapes through the membrane.
- Z-liner is freely suspended between the outer material and the lining

### GORE-TEX PRO WITH ARMACOR PRODUCT TECHNOLOGY

Thanks to its patented lattice structure with an integrated Kevlar core this technology offers extreme tear and abrasion resistance yet lighter weight. Incorporated into a Gore-Tex Pro motorcycling jacket, it will protect enthusiastic motorcyclists in the event of a fall. This means safety and enhanced comfort - in all weather conditions.

- Extremely tough, extremely breathable, durably waterproof and windproof
- Provides perfect and lasting protection against the variable weather elements.
- An ideal combination of passive and active security.
- Durable waterproofness, total windproof protection and increased breathability with Gore-Tex 3-layer laminate.
- Even greater comfort in warm weather.
- Even more protection against cooling in wet weather.

### GORE-TEX PRO LEATHER LAMINATE

- The best advantages of leather combined to waterproofness - leather for every weather
- The only durably waterproof, breathable leather material for Motorsports apparel.
- A 3-layer Gore-Tex Pro laminate with 1,2 mm bovine leather outer material
- A highly breathable, hydrophobic leather prevents the suit from getting wet

**MORE PASSIVE SAFETY WITH  
 A MORE COMFORTABLE  
 STRETCH MATERIAL**

- 100% Waterproof
- Windproof
- Durable
- Breathable
- Extremely comfortable due to the highly elastic outer material

**YKK AQUASEAL® IS A NEW TYPE OF WATERPROOF ZIPPER WHICH USES  
 POLYESTER ELASTOMER FOR THE ZIPPER TAPE.**

The lightweight fully waterproof zipper to consider for equipment complying with the latest international maritime safety standards. Combining Vislon technology with a seal between the zipper elements, Aquaseal allows for easy and smooth operation with protection in critical situations.

- Flexibility of the zipper increases the suit's fit.
- Smooth slider operation and high operability

**CORDURA**  
BRAND  
F A B R I C

**CORDURA**  
AFT BRAND  
F A B R I C

**HIGHER ABRASION RESISTANCE VS. BETTER BREATHABILITY**

**CORDURA:**

Enhanced tear and abrasion resistance, and long-lasting durability.

**CORDURA AFT:**

Knitted mesh structure. More comfort when riding in hot climate.

- Cordura is a nylon yarn made out of 100 % polyamide fibres. The raw fibres are cut, respun and finally woven to a fabric.
- Cordura is available in many different fibre strengths and has a much higher abrasion resistance than regular nylon.
- Rukka employs only Cordura with a minimum fibre strength of at least 500 denier, raising safety standards to a very high level.

**Tear- and abrasion-resistant Cordura AFT fabric.**

- + Knitted mesh structure. More comfort when riding in hot climate.
- + Cordura AFT is 2-7 times more durable than Nylon, polyester and Cotton
- + High performance polyamide fibres form the basis of lightweight design that has an extremely high resistance against wear and tear

**rukka**  
**Antiglide**  
system

**rukka** **Air**  
**Cushion**  
system

**ENHANCED SAFETY AND COMFORT**

**ANTIGLIDE KEPROTEC**

reinforcement material (includes Kevlar) in the seat area ensures a good grip and prevents sliding over the seat

**AIR CUSHION SYSTEM**

works as a climate buffer and reduces condensation. Enhances comfort on long rides.

1. 100 % water- and windproof Gore-Tex membrane
2. Knitted Air Cushion net
3. Breathable lining

## ADAPTIVE COMFORT

Not too hot... Not too cold... But just right.

Revolutionary Outlast material contributes to a comfortable thermal balance. It absorbs and releases warmth according to the wearer's individual needs acting as a temperature balancing buffer.

- Outlast works as a thermal shock absorber by slowing the rate of temperature change within a wearer's personal microclimate.
- Outlast reduces the rate at which a person will overheat or get cold.
- Outlast will provide enhanced comfort.

100 % WINDPROOF

- 100 % windproof
- Water repellent
- Breathable
- Comfortable in various weather conditions

The blue areas show that this fabric cannot withstand wind. Although the outside temperature remains the same, you will quickly start to feel cold. This is the windchill effect.

The red areas show that the Windstopper fabric can block the wind. You remain comfortable and warm and can maintain your level of physical activity.
