After a record year in MotoGP, Suomy Motosport is about to begin a new season, full of great sports results premises and innovative products in several categories.

The main novelty of the collection is "STELLAR": the new Suomy full face helmet. It introduces itself as a affordable helmet. Shapes and geometries, inspired by the innovative Speedstar (landmark

MANUEL POGGIALI

LIVIO LOI

JOHAN BOONEN

TROY CORSER

for sport touring) make the new model in ADV advanced thermoplastic absolutely effective for aerodynamics and balance. All the other main components have also been made by following a selective process, just as a top range helmet is, further, it has a full equipment such as Class Optical 1 visor, Wide sun-visor, wide air vents and Pinlock Max Vision included; these features and inimitable Suomy graphics make it unique.

In sports activities the medal collection of Suomy has considerably increased: record of victories for Andrea Dovizioso, unquestioned protagonist of 2017 MotGp season, and Yonny Hernandez 's podium, during the most prestigious Endurance race, the Bol D'Or.

In Off Road, the season has been full of exalting performances: Gerard Farres's podium with Suomy Alpha in the Dakar, the most insidious rally-raid; Indonesian victory of Samuele

MAX BIAGGI

Bernardini in MX2, and Arnaud Tonus success in MXGP in his home race, in Swiss. The second World title for Suomy Alpha comes with the young talent Andrea Verona and TM Racing, able to win a race in advance, in Youth Enduro World Championship,

At the same time, the work of the R&D department has constantly continued to collect all data and technical arrangements, now the starting point for next Suomy off road and supersport products.

SR SPORT CARBON

RACING

SR-SPORT

→ An important leadership in the World Championship, with Andrea Dovizioso, as a "business card" for the helmet that makes the most important circuits its natural habitat. Thermoformed flexible visor, anti-fog treatment, dual purpose spoiler for stability-extraction meet all the professional riders and demanding motorcyclists needs. The Carbon version, faithful replica of the same helmet designed and developed with "6 times" World Champion Max Biaggi, exalts balance and lightness, now improved.

2018 HELMETS COLLECTION

NEW MODEL

SPEEDSTAR

→ The ambitious Speedstar is the new Suomy intuition that, with more than 20 years of experience in competitions, is offering a new concept of a versatile sports helmet. Frequent wind tunnel sessions, tested as a racing helmet, allowed to create dynamic shapes, a powerful aerodynamic coefficient and an enviable overall balancing. The R&D, Design and Riding Test department created a package of solutions that enhance comfort, versatility with breathable technical fabrics, D-Ring chin strap and balanced fitting suitable for any type of riding. The new injection visor in Optical Class 1 and variable thickness, with Pinlock Max Vision, ensures the best visibility from several driving angles; the inedited Wide-Sunvisor extends to the cheek pads borders offering a full protection from the sunlight.

MX TOURER

→ MX Tourer is Suomy's ace for wide range touring. Its plus are lightness and small dimensions of shell, which, together with high level

technical solutions, assure a long term use without any physical effort. A perfect symbiosis between a full face road helmet and an off road one: the peak, removable for long journeys, is studied in the wind tunnel and limits aerodynamic resistance also at high speed; the wide viewing window and the inside sun visor become a must for every adventure during day or night.

Kevin STRIJBOS, MXGP, 2017.

TECH INFO

Samuele BERNARDINI, MX2, 2017.

TECH INFO

TECH INFO

→ The outer shell is made of TRICARBOCO fiber, a mixture of Kevlar, carbon and fiberglass with different weights/breaking loads linked up. Loads, linked up with aramid resins that ensure a lighter, harder, more safety and impact resistant shell.

→ Outer shell in injection-molded THERMOPLASTIC REINFORCED RESIN.

→ The shell is made of fine CARBON (at sight), Kevlar and fiber with different weights/ tensile strength linked up with resins that ensures a lighter shell but, at the same time, harder more protective and impact resistant.

→ The shell shapes and related aerodynamic spoilers are optimized due to intensive sessions in the wind tunnel. Aerodynamic performances allow the best comfort at all speed

→ The practical internal Maxi Vision lens provides an effective and wide anti-fog protection and, therefore, a wide vision field in the most critical conditions

→ The most popular riders, in different categories, help to develop and optimize the performance of Suomy helmets thanks to the technicians of the racing department. This interaction allows a continuous development of the helmet performances in the most critical conditions

→ Shapes, positions, air intakes positioning, canalization of the inner shell, comfort liners are developed to obtain the maximum efficiency in heat dissipation inside the helmet.

→ Visor geometries are carefully studied and designed through advanced optical software. The visor has a variable thickness in order to obtain the optical class 1, the best performance achievable for lens.

→ Vertical and peripheral visibility fields are primary aspects while riding in road and track. The wide opening of the visual field allows a safer and more performing ride.

→ Printed visor produced by a thermoformed sheet. Each visor is a unique piece, having unparalleled optical quality and mechanical resistance. Thanks to our process, it is not necessary to use bulky, and at times, distorting visor films, since our visor is pre-treated with anti-fog and scratch-proof material.

→ Available in a variety of colors.

→ The visor is three-dimensional, optically accurate, printed in optic PC, treated with scratch-proof and UV blocking material.

→ Internal visor that can be operated from the outside and functions as sunglasses.

→ The new mechanism under the visor is carefully designed in every detail in order to have a solid assembly with the visor and an easy removal system without the use of any tool

→ Aerodynamics spoilers are the result of in-depth aerodynamics studies through dedicated software whose outcomes are tested in the wind tunnel. The result is an exceptional aerodynamic penetration and extraordinary stability at various speeds.

→ Quick visor release: The mechanism is designed in every detail for a solid assembly with the visor and an easy removal system without the use of tools.

→ Visor is treated with the most performing anti-fog processes to guarantee the best performance even in the most critical conditions.

→ Visor is treated with the most performing anti-scratch processes which effectively protect the surface.

→ The practical internal lens provides an effective anti-fog protection in the most critical conditions

→ Cheek pads and internal shell are completely removable and washable. They are made with prestigious sweat-absorbing materials largely customizable.

→ Adjustable peak with a wide range of motion.

→ Removable peak designed to have an optimal aero-dynamic penetration.

→ The D-ring retention system ensures stability, safety and strength. The strap features D-rings in light alloy.

→ Micrometric retention system with rapid release: simple and strong.
